file

Drencher Fire Control System Drenchers are a system of water heads that are used for the fire protection. In contrast to sprinklers which are found internally, drenchers are normally found on the exterior of a building to protect against a fire from a neighbouring building. They tend to be positioned on roofs and over windows and external openings. Drenchers - Designing Buildings Wiki LNG is highly flammable, which makes the fire protection system crucial consideration when constructing the vessel. Drencher and High velocity nozzles placed around the LNG tanks to provide sufficient coverage of water to cool the surface of the tanks and their surroundings.
