improved sensitivity. The combination of increased magnetic field strength with multi-channel detectors has made it possible to routinely obtain images at about 300 micron resolution. High Field MRI of Brain Iron - PubMed Central (PMC) UHF: ultra-high-field.

SUMMARY: Cerebrovascular disease is a major source of mortality that commonly requires neurosurgical intervention. MR imaging is the preferred technique for imaging cerebrovascular structures, as well as regions of pathology that include microbleeds and ischemia. High Field MRI Neuroradiology Parkinson clinical application psychiatry radiology . Editors and affiliations. Ugo Salvolini. 1; High Field Brain MRI | SpringerLink Traditionally “Open” MRIs have been considered inferior to closed scanners due to their lower field strengths. Closed scanners used in clinical practice typically have a field strength, measured in Tesla, of 1.5T (Tesla) or 3T. These are considered high field MRI scanners. Open scanners, due to their “pancake” or upright design, have less homogeneity, and therefore a weaker magnet field strength of 0.2T to 0.6T, resulting in inferior image quality and longer exam times.
