Surface Chemistry Of Froth Flotation The process of froth flotation is an outstanding example of applied surface chemistry. It is extensively used in the mining, mineral, metallurgical, and chemical industries for separation and selective concentration of individual minerals and other solids. Substances so concentrated serve as raw materials for producing appropriate metals and chemicals. Leja. Plenum ... While the specific means of hydroxamate adsorption onto a mineral surface has been confirmed as occurring via chemical adsorption, some authors believe that the true selectivity observed in flotation systems employing a hydroxamate collector is due to the adsorption kinetics of the collector onto the mineral surface (Assis et al., 1996).
