substances and improves artery opening and blood flow, reduces sodium (salt) retention, and decreases strain on the heart. Cardiac Medications | American Heart Association Cardiovascular System Physiology Functions of the Cardiovascular System. The cardiovascular system has three major functions: transportation of materials, protection from pathogens, and regulation of the body's homeostasis.

Transportation: The cardiovascular system transports blood to almost all of the body's tissues. The blood delivers essential nutrients and oxygen and removes wastes and carbon dioxide to be processed or removed from the body. Cardiovascular System - Human Veins, Arteries, Heart The first machine-read ECGs emerged
