The cardiovascular system is actually comprised of two systems: The pulmonary circulation, in which the heart

pumps the blood to your lungs and back again, and the circulatory system, in which the heart pumps the oxygen-rich blood to the rest of the body. Major Functions of the Cardiovascular System Functions of the Cardiovascular System | Healthcare-Online Responsible for transporting oxygen, nutrients, hormones, and cellular waste products throughout the body, the cardiovascular system is powered by the body's hardest-working organ — the heart, which is only about the size of a closed fist. Even at rest, the average heart easily pumps over 5 liters of blood throughout the body every minute. Cardiovascular System - Human Veins, Arteries, Heart The Cardiovascular System at a Glance is the perfect

introduction and revision aid to understanding the heart and circulation and now also features: Additional chapter on pulmonary hypertension Even more simplified illustrations to aid understanding Reorganized and revised chapters for greater clarity The Cardiovascular System at a Glance: Amazon.co.uk ... Circulatory system Your circulatory system is made up of three parts: the heart, blood vessels and the blood itself. Your heart keeps all the blood in your circulatory system flowing. The blood... What is the circulatory system? - BBC Bitesize The circulatory system, also called the cardiovascular system or the vascular system, is an organ system that permits blood to circulate and transport nutrients (such as amino acids

and electrolytes), oxygen, carbon dioxide, hormones, and blood cells to and from the cells in the body to provide nourishment and help in fighting diseases, stabilize temperature and pH, and maintain homeostasis. Circulatory system - Wikipedia Heart and circulatory diseases (also called cardiovascular diseases) are problems with your heart and circulation system. We fund research into these conditions and their risk factors, including: coronary heart disease (heart attack and angina) How your heart works - Heart and circulatory system ... The circulatory system includes both the cardiovascular system and the lymphatic system. The cardiovascular system moves blood throughout the body, and the lymphatic system

moves lymph, which is a clear fluid that's similar to the plasma in blood. Blood contains nutrients from the foods you eat and oxygen from the air you breathe. What Is the Cardiovascular System? - dummies The cardiovascular system consists of the heart, blood vessels, and blood. This system has three main functions: Transport of nutrients, oxygen, and hormones to cells throughout the body and removal of metabolic wastes (carbon dioxide, nitrogenous wastes).. Protection of the body by white blood cells, antibodies, and complement proteins that circulate in the blood and defend the body against ... Functions of the Cardiovascular System The blood circulatory system, also called the cardiovascular system, consists

of the heart and the blood vessels that run throughout the body. It delivers nutrients and oxygen to all cells of the... 15 circulatory system diseases: Symptoms and risk factors Cardiovascular disease (CVD) is a general term for conditions affecting the heart or blood vessels. It's usually associated with a build-up of fatty deposits inside the arteries (atherosclerosis) and an increased risk of blood clots. It can also be associated with damage to arteries in organs such as the brain, heart, kidneys and eyes. Cardiovascular disease - NHS The human body has 11 major organ systems, each with specific functions and energy needs. The cardiovascular system, or CVS, serves all of them, delivering vital nutrients, picking up and distributing

metabolic products and carrying away waste for elimination. The CVS is composed of 3 major components: the heart, the arteries and the veins. What Are the Three Major Parts of the Cardiovascular System? The circulatory system is made up of blood vessels that carry blood away from and towards the heart. Arteries carry blood away from the heart and veins carry blood back to the heart. The circulatory system carries oxygen, nutrients, and hormones to cells, and removes waste products, like carbon dioxide.
