The MG996R is a metal gear servo motor with a maximum stall torque of 11 kg/cm. Like other RC servos the motor rotates from 0 to 180 degree based on the duty cycle of the PWM wave supplied to its signal pin. MG996R Servo Motor Datasheet, Wiring Diagram & Features This is a large capacity servo for improved 1-2 shift feel. This is a great bolt on high performance part for the C6. It is

easy to install and does not require removal of transmission to install. Will help increase clamping force of intermediate (2nd gear) band. C6 R Code Servo Kit - Broader Performance Radio control servos are connected through a standard three-wire connection: two wires for a DC power supply and one for control, carrying a pulse-width modulation (PWM) signal. Each servo has a separate connection and PWM signal from the radio control receiver. This signal is easily generated by simple electronics, or by microcontrollers such as the Arduino. Industrial Automation R+W servo couplings are  
durable, maintenance-free multitaskers:. They are  
compact, torsionally rigid or vibration-damping, and  
always backlash-free. They meet all major technical

and economical servo drive requirements because of their positional stability, synchronicity and precise functionality. Servo Drive Technology : R+W Couplings How it works: The Fujinon B4 lenses use analog control over the servo unit attached to the lens. You supply 12V to the lens; it provides 2.5, 5.0, and 7.5v outputs to use for control. 5v is used to tell the servo control you want a control mode or not. 2.5 and 7.5 are used as low/high, near/far, etc... control voltages. r/videography - How-To: Using Servo-Controlled Fujinon B4 ...
