The thrust plate prosthesis is a new type of hip prosthesis which maintains the physiological loading pattern of the bone. Experimental stress analysis of the proximal femur led to the development of this device, and clinical results over a period of more than 12 years confirm the sound biomechanical concept on which it is based. SpringerLink Abstract. Background: The thrust plate prosthesis (TPP) is an alternative to a stemmed total hip prosthesis. This stemless femoral implant designed for total hip arthroplasty (THA) was developed to simulate the physiological loading of the metaphysis of the proximal femur and can be used in young patients. First Experiences in 200 Thrust Plate Prosthesis | Insight ... Until the end of the 1950s, the possibilities of surgically treating painful, crippling hip conditions were restricted to arthrodesis and operations of the Girdlestone and Milch Batchelor type.... Thrust Plate Prosthesis Hip Replacement (TTP) - The North West Hip & Knee centre is one of the UK's leading orthopaedic clinics in the diagnosis and treatment of hips. Thrust Plate Prosthesis Hip Replacement surgeon Mr Aslam Mohammed FRCS, FRCS (Orth) is internationally reknown for his pioneering hip surgery. Thrust Plate Prosthesis Hip Replacement - North West Hip ... The thrust plate prosthesis (TPP) is a neck preserving femoral component in total hip arthroplasty (THA) which may facilitate more precise biomechanical reconstruction of the hip. The purpose of th... A Biomechanical Comparison of the Thrust Plate Prosthesis ... As is probably the case with all successful innovations, the unique design of the thrust plate prosthesis (TPP) was not born of a sudden fancy for a radically different hip joint replacement, but emerged from elaborate biomechanical investigations on the loosening of conventional, intramedullarily anchored hip prosthesis shafts. In the 1970s, hip revisions due to loosening of the

prostheses became a burden to patients not only physically and psychologically but also economically. The Thrust Plate Hip Prosthesis - A H Huggler, Hilaire A C ... The Thrust Plate Prosthesis is a femoral implant designed for total hip arthroplasty, based on the principles of physiologic loading of the metaphysis of the proximal femur, and preserving the bone stock. This study presents the long-term clinical and radiological results of 34 patients with 36 Thrust Plate Prostheses. In a retrospective analysis, we investigated the reoperation-free survival ... The Thrust Plate Prosthesis: long-term clinical and ... As is probably the case with all successful innovations, the unique design of the thrust plate prosthesis (TPP) was not born of a sudden fancy for a radically different hip joint replacement, but emerged from elaborate biomechanical investigations on the loosening of conventional, intramedullarily anchored hip prosthesis shafts. The Thrust Plate Hip Prosthesis For Kindle - video dailymotion A hip joint prosthesis that has a strap plate and a hollow, tapered femoral neck subassembly. The femoral neck includes a flanged force plate that radiates from a head stem base and abuts the femur. Several longitudinal ridges and/or an annular recess or other surface treatment at the head stem base facilitates retention in the femur. US7569075B2 - Thrust plate hip prosthesis - Google Patents For the force transfer characteristics of thrust plate prosthesis (TPP), a new type of hip prosthesis used without cement is similar to the normal hip. We evaluated the possibilities of early weight bearing after TPP by comparing early partial with early full weight bearing. DESIGN: Randomized controlled study. Comparison of two

different rehabilitation programmes for ... Summary: Concerned with thrust plate prosthesis, a type of hip prosthesis which maintains the physiological loading pattern of the bone. The text discusses the benefits of this development, especially for use in physiologically active and young patients. The thrust plate hip prosthesis (Book, 1997) [WorldCat.org] The thrust-plate prosthesis, which allows preservation of part of the femoral neck, was used in younger patients, 80% were younger than 60 years. Radiological findings and clinical results of 102 thrust ...
